

CMT83085/CMT83087 High Reliability Isolated Half- Duplex RS-485 Transceivers

1 Features

- Safety-related certifications
 - DIN VDE V 0884-11: 2017-01
 - UL recognition: up to 5000Vrms for 1 minute per UL1577
 - CSA component notice 5A
 - CQC approval per GB4943.1-2022
- Up to 5000Vrms Insulation voltage
- Bus side power supply voltage: 3.0V to 5.5V
- VDD1 supply voltage: 2.5 to 5.5 V
- High CMTI: $\pm 200\text{Kv/us}$
- High system level EMC performance:
- Bus Pins meet IEC61000-4-2 $\pm 12\text{ kV ESD}$
 - Other Pins meet $\pm 7\text{ kV contact ESD}$
 - Operation temperature: -40°C to 125°C
- Fail-safe protection receiver
- Slew rate limitation
- Robust isolation barrier life:
 - More than 40-year projected lifetime
- Up to 256 transceivers on the bus
- RoHS-compliant packages: SOIC 16 (wide body)

2 Applications

- Industrial automatic control
- Isolated RS-485 communication
- Smart electric meter and water meter
- Security and protection monitoring

3 Description

CMT83085/CMT83087 is a high reliability isolated half duplex RS-485 transceiver based on CMOSTEK digital isolation technology. It is safety certified by UL1577 support 5kVrms insulation withstand voltages, while providing high electromagnetic immunity and low emissions at low power consumption.

The Bus pins of CMT83085/CMT83087 is protected from $\pm 12\text{kV}$ system level ESD to GND2 on Bus side. These devices feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. The devices have a 1/8-unit-load receiver input impedance that allows up to 256 transceivers on the bus.

The data rate of CMT83085/CMT83087 is 12Mbps. The device is slew limited to reduce EMI and reflections with improperly terminated transmission line.

The CMT83085/CMT83087 is available in wide-body (WB) 16-pin SOIC packages.

6.2 PCB Layout Guidelines

The CMT83085/CMT83087 requires a 0.1 μF bypass capacitor between VDD1 and GND1, 10 μF bypass capacitor between VDD2 and GND2. The capacitor should be placed as close as possible to the package. To eliminate line reflections, each cable end is terminated with a resistor, whose value matches the characteristic impedance of the cable. It's good practice to have the bus connectors and termination resistor as close as possible to the A and B pins.

6.3 ESD Protection

ESD protection structures are enhanced on all pins to protect against electrostatic discharge encountered during handling and assembly. The Bus pins have extra protection against static electricity to both the logic side (VDD1 side) and bus side (VDD2 side).

ESD protection can be tested in various ways. Below is the ESD spec of the devices. Bus pins:

- ± 8 kV HBM.
- ± 12 kV using the Contact Discharge method specified in IEC 61000-4-2

Other pins except bus pins:

- ± 6 kV HBM.
- ± 7 kV using the Contact Discharge method specified in IEC 61000-4-2

6.4 256 Transceivers on the Bus

The devices have a 1/8 unit-load receiver input impedance ($96\text{k}\Omega$) that allows up to 256 transceivers on the bus. Connect any combination of these devices, and/or other RS-485 devices, for a maximum of 32 unit-loads to the line.

10 Function Description

10.1 Function Overview

CMT83085/CMT83087 is a high reliability isolated half duplex RS-485 transceiver. Data isolation is achieved using Cmostek integrated capacitive isolation that allows data transmission between the logic side and the Bus side. CMT83085/CMT83087 is safety certified by UL1577 support 5k VRMS insulation withstand voltages.

10.2 Data Rate

The data rate of CMT83085/CMT83087 is 12Mbps. The device is slew limited to reduce EMI and reflections with improperly terminated transmission line.

10.3 True Fail-safe Receiver Inputs

The devices feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. The receiver threshold is fixed between -50mV and -200mV, which meets RS-485 standard. If the differential input voltage ($V_A - V_B$) is greater than or equal to -50mV, receiver output R is logic high. In the case of a terminated bus with all transmitters disabled, the differential input voltage is pulled to zero by the termination resistors. Due to the receiver threshold, the receiver output R is logic high.

10.5 Thermal Shutdown

The device is protected from over temperature damage by integrated thermal shutdown circuitry. When the junction temperature (T_J) exceeds +165°C (typ), the driver outputs go high-impedance. The device resumes normal operation when T_J falls below +145°C (typ).
